Controls

Movement: WASD keys

Interact: E key

Pause: P key

Sprint: Shift key

Limitations/Bugs

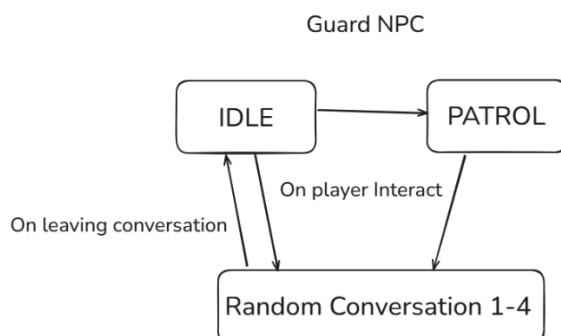

Limitation 1: As much as possible, the code was made to be scalable in the case of adding more scams/offers, however the UI and some of the coding of these messages need to be customised and adjusted for every new one to come.

For example, button and function to investigate the sender of the offer can be replicated, however the result of investigating must be custom to each scenario.

Limitation 2: Applied character model pack only has 4 variations, change of skin colour is enough to differentiate NPCs but is not ideal.

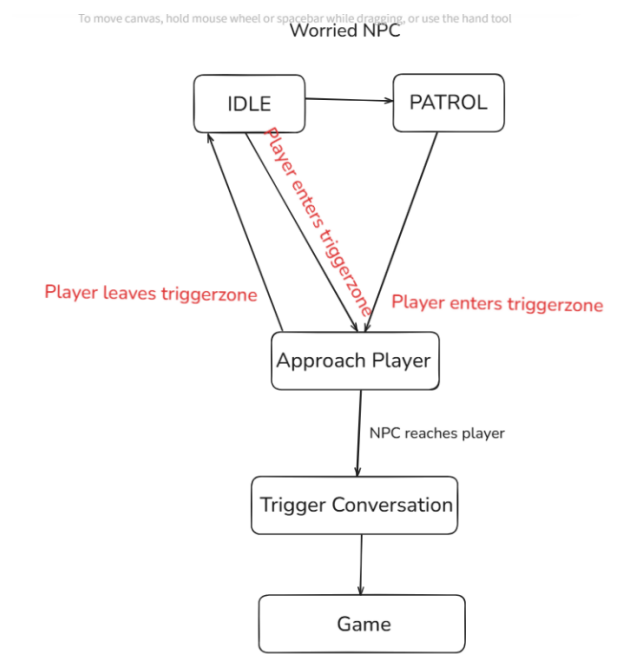

Bugs: Worried NPC approaching and interacting with player from behind does not turn player to face NPC, causes situation where you cant turn but are speaking to the npc.

FSM Diagrams

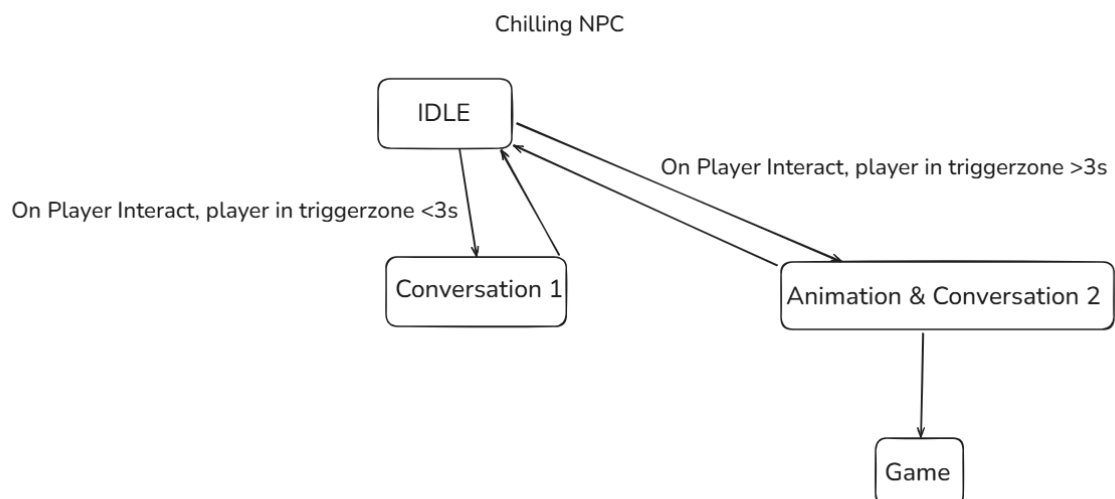

Implementation: Coroutine of Idle for 3 secs then begin coroutine of patrol. Patrol points are logged with index no. to allow wrapping around and will patrol 1st point again after completing all other points.

At any coroutine, if player interacts, will stop all coroutines and Look at player. Randomises a number 0-3, with each number activating a different chat line. Ending the conversation restarts idle coroutine.

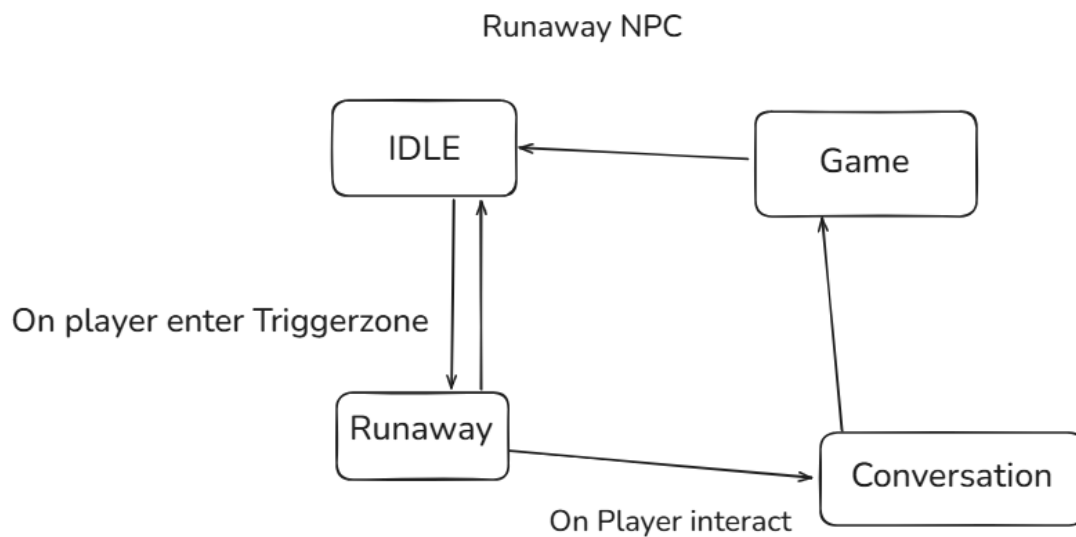

Implementation: Coroutines. Target position will be player when in trigger zone. When distance between NPC and player is less than specified float, NPC will stop and activate conversation window and lock player movement and camera, also activating cursor.

Implementation: Coroutines of Idle and Turn. Turn-Randomises an angle and a direction, will turn that angle after every Idle. Tracks if player is within trigger zone for

longer than specified float, then plays animation if that is true and unlocks the next conversation which will lead to the game menu.

Implementation: Coroutines of Idle and Turn. Turn-Randomises an angle and a direction, will turn that angle after every Idle. On player enter trigger zone, NPC will use Nav mesh to run to set hiding spot. Interact will lead to conversation and game.
